ARMAŞ A.Ş. was founded in 1998 to produce valves for potable water and agricultural irrigation systems. It has become one of the leader establishments of its sector in a short time thanks to ARMAŞ makes valves.

ARMAŞ A.Ş. has given high quality services with economical prices to his costumers in industry, potable water networks and agricultural irrigation systems by means of Hydraulic Control Valves, Automatic Filtration Systems, Gate Valves, Ball Valves, Strainers, Check Valves, Air Valves and Hydrants he produced. Our company who does not sacrifice quality in production has used ISO 9001-2000 Quality Management System since 2000. In the scope of importance we gave for both human and environment, we have developed our institutional structure day by day with ISO 14001 Environmental Management System Certificate and TS 18001 Occupational Healthy and Safety Certificate since 2007.

Our products have been subjected to pressure and performance tests before sales by Quality Control Department and technical support services have been given at the installation, operation and maintenance stages after sales by our experienced engineers.

Our company who have continued R&D investments in order to present more quality and reliable products to his costumers, will continue its costumer-satisfaction focused services with increasing achievements in future thanks to his dynamic staff, powerful brand and permanent developing structure.
800 SERIES
Armaş 800 series automatic hydraulic control valves are designed in the “Y” body model type so as to show maximum resistance to cavitation under minimum head loss in high flow rates. Armaş 800 series automatic hydraulic control valves are double-chamber diaphragm actuated and disc closed type. Valve has a standard double control chamber.
Available Sizes: 2” (50 mm) - 12” (300 mm)
Available Connection Types: Flanged
Available Pressure Norms: PN16 - PN25 - PN40

600 SERIES
Armaş 600 series valves are the direct diaphragm closing automatic hydraulic control valves which work with line pressure. It ensures easy and smooth flow with minimum pressure losses thanks to excellent design of valve body and diaphragm.
Available Sizes: 1½” (40 mm) - 12” (300 mm)
Available Connection Types: Threaded, Flanged, Grooved End
Available Pressure Norms: PN10 - PN16 - PN25

500 SERIES
Armaş 500 series valves are direct diaphragm closing automatic hydraulic control valves which work with line pressure. They ensure easy and smooth flow with minimum pressure losses thanks to excellent design of valve body and diaphragm. Armaş 500 series hydraulic control valves are designed so that it can be used in potable water force network, agricultural irrigation, filtration, applications by even an unskilled personnel.
Available Sizes: 1½” (40 mm) - 4” (100 mm)
Available Connection Types: Threaded, Flanged

BACK FLUSHING VALVES
Backflushing control valves are the 3-way control valves which are operated by line pressure or an external pneumatic pressure. Valve works in filtration and back flushing mode as coordinated with filter elements in the system.
Available Sizes: 2” (50 mm) - 4” (100 mm)
Available Connection Types: Threaded, Flanged, Grooved End
## HYDRAULIC CONTROL VALVES

</table>
ALARM CHECK VALVES

Armas FCV Alarm Check Valve is designed for wet applications where the water has no the danger of frost. The pressurized water which is inside of the pipe-line is discharged by sprinklers because of fire situation. When the discharged pressurized water system is supporting continuously, retard chamber is being full. Then, the pressure switch on the retard chamber is actuated. The pressure switch sends alarm information to fire warning system or the automation system. After the pressure switch is actuated, the water is delivered to the gong and releases a mechanical alarm.

Available Sizes: 2½” (65 mm) - 8” (200 mm)
Available Connection Types: Flanged

BUTTERFLY VALVE WITH SUPERVISORY SWITCH

It is a butterfly valve with supervisory switch for separating zones and operates such as a control valve on fire fighting systems. Monitoring is available with this valve and for positioning, it is provided handwheel on the rod connects with the gear box. It is possible to get info about the system to see on the valve’s body. The valve is able to install on indoor&outdoor applications.

Available Sizes: 2” (50 mm) - 12” (300 mm)
Available Connection Types: Flanged

OS&Y GATE VALVES - NRS GATE VALVES

OS&Y Valve is a type of gate valve which is able to follow the opening/closing position by moving the stem up&down movement, is able to follow electronically the movement by adding a monitoring key, and full open position does not disrupt the flow. OS&Y Valve generates low head loss according to butterfly valves. Valve is closed or opened by moving wedge upward or downward via threaded stem mounted in the body. Wedge is rubber coated and it is not used as a check valve and flow rate adjustments.

Available Sizes: 2” (50 mm) - 8” (200 mm)
Available Connection Types: Flanged

FIRE HYDRANTS (OVERGROUND - UNDERGROUND)

Armas Overground Fire Hydrants are designed and manufactured according TS EN 14384 standards and provide water to fire brigade crew at possible fire moment to treat rapidly. The hydrants are used in supplying water for fire brigade in factories, warehouses, industrial plants, around the buildings, fire sensitive forestlands and residential areas.

It is the hydrant of which watering outlets are under ground and cover is on the ground. It consists of stem which controls hydrant valve, spring check valve which makes automatic discharge service, cast pieces forming main body and hose connecting bonets. Opening-closing process is achieved by controlling stem with the help of hydrant key. Spring check valve on body discharges water within hydrant when it is not used and prevents freezing in cold weather. Underground hydrants are used in supplying water for fire brigade in factories, warehouses, industrial plants, around the buildings, fire sensitive forestlands and residential areas.

Available Sizes: 3” (80 mm) - 4” (100 mm)
Available Connection Types: Flanged
MECHANICAL VALVES

RESILIENT SEATED GATE VALVES-F4
Valve is closed or opened by moving wedge upward or downward via threaded stem mounted in the body. Wedge is rubber coated and it is not used as a check valve and flow rate adjustments.

Available Sizes: 2" (50 mm) - 24" (600 mm)
Available Connection Types: Flanged

RESILIENT SEATED GATE VALVES-F5
Valve is closed or opened by moving wedge upward or downward via threaded stem mounted in the body. Wedge is rubber coated and it is not used as a check valve and flow rate adjustments.

Available Sizes: 2" (50 mm) - 24" (600 mm)
Available Connection Types: Flanged

AIR COMBINATION VALVES - AAV SERIES
Armaş AAV Series Automatic Air Release Valves are the valves that operate with line pressure. Armaş AAV Series Automatic Air Release Valves are the air valves that provide the venting of the air during filling and preventing of vacuum by taking air into the installation during emptying, releasing of the air that accumulates in the installation during active operation with the help of pressure and that operates in automatic manner.

Available Sizes: 2" (50 mm) - 8" (200 mm)
Available Connection Types: Flanged

AIR RELEASE VALVES - SINGLE&DOUBLE ORIFICE
Single&Double Air Valves ensure that air in the pipe will be automatically evacuated when pipeline is filled with water. Air is evacuated quickly so that water will not make back pressure and affect flow negatively. When water in pipeline is drained, air enters into pipe quickly in such a way that it will not create vacuum. It is proposed that double air valve will be used for maximum efficiency. Generally it is used in pump downstream; automatic irrigation controller upstream and in elevation differentials emerged by referring water source.

Available Sizes: 2" (50 mm) - 8" (200 mm)
Available Connection Types: Flanged
CHECK VALVES
Swing check valve permits that water passes toward flow direction and prevents water flow in counter direction. It is manufactured in such a way that it will be closed by its own weight or by a weight mechanism. It is used in especially pumping plants to prevent back flow in case pump becomes out of service. It may be used in hot and cold water plants and with each kind of acid free gases and liquids.

Available Sizes: 2” (50 mm) - 8” (200 mm)
Available Connection Types: Flanged

FLOAT VALVE
Float valves are made from cast iron and of flanged type. Articulated lever connected to valve stem achieves opening or closing process by means of float. It is used for that water level will not decrease under desired level.

Available Sizes: 2” (50 mm) - 6” (150 mm)
Available Connection Types: Flanged

STRAINERS
Strainer is the installation equipment which separates dirt, sediments and various foreign substances which may exist in the fluid (cold water, hot water, superheated water and steam) physically thanks to its filter and prevent them to damage other equipment in installation. Strainers are used to protect equipments such as pumps, water counters and automatic check valves from foreign matters by being mounted on intake side of this equipment.

Available Sizes: 2” (50 mm) - 16” (400 mm)
Available Connection Types: Flanged

DISMANTLING JOINT
Dismantling piece is one of the components which ensure easiness in mounting and dismantling valves. During mounting and dismantling, necessary working space is created by shortening length of dismantling piece. Dismantling piece should be applied depending on specified L length and flow direction.

Available Sizes: 4” (100 mm) - 20” (500 mm)
Available Connection Types: Flanged
AUTOFLUSH® AUTOMATIC SCREEN FILTERS
AutoFlush® Automatic Screen Filter is the ideal solution for agricultural and municipal filtration due to its large filtration area, reliable operation mechanism and simple structure. AutoFlush® Automatic Screen Filter works on differential pressure and cleans itself automatically without any external intervention. AutoFlush® Automatic Screen Filter has electronically activated models besides hydraulically controlled models. Due to suction nozzles, cleaning is achieved with little water consumption. Besides the standard 130 micron filter size, different screen sizes are available for different dirt levels.

Available Sizes: 2" (50 mm) - 8" (200 mm)
Available Connection Types: Threaded, Flanged, Grooved End
Available Filtration Degrees: 100 micron (150 mesh), 130 micron (120 mesh)

MINI DISC-SCREEN FILTERS
Armaş Mini Disc-Screen Filters are designed to ensure deep filtration for lower flow. Manufactured in high quality plastic, which ensures easy handling, high resistance and durability.

Available Sizes: 1/4" - 1" - 1 1/4" - 1 1/2" - 2"
Available Connection Types: Threaded
Available Filtration Degrees: 130 micron (120 mesh)
GRAVEL (SAND-MEDIA) FILTERS
Gravel filters are designed to be used in filtration of river, lake, pool water and water resources containing organic materials such as lichen and alga is over 15m³/h implicating that they are rapid filters. The outstanding advantage of the gravel filters against other types of filters is about maximum filtration efficiency due to deep filtration. Armaş Gravel filters are designed to provide ease of use, maximum filtration efficiency and less maintenance due to simple structure and thus, they are offered to the users.

Available Sizes: 2"- 2½"- 3"- 4"
Available Tank Sizes: 20"- 24"- 30"- 36"- 48"
Available Connection Types: Threaded, Flanged, Grooved End

HYDROCYCLONE (SAND SEPARATOR)
Armaş Hydrocyclones are designed in simple structure to be used in the filtration of well water or other water sources containing sand, gravel or particles heavier than the water. Due to simple structure, it is more economic and easy to use relative to other sand separators. Armaş Hydrocyclones causes minimum pressure loss in filtration systems and therefore, they operate at maximum efficiency. Armaş Hydrocyclones, used as primary filtering element in filtration systems, are provided in single or modular forms which ensure manual or fully automatic cleaning process.

Available Sizes: 2" (50 mm) - 8" (200 mm)
Available Connection Types: Threaded, Flanged, Grooved End

SUCTION FILTERS
Suction filter is designed to protect the pumps from debris and foreign matters. It is generally used in water sources containing algea, debris, and other heavy wastes. It is connected to pump suction and submerged into water (river, lake, reservoir, etc.)

Available Sizes: 4" (100 mm) - 12" (300 mm)
Available Connection Types: Flanged

PLASTIC AIR VALVES (AUTOMATIC-KINETIC)
Armaş Plastic Air Valves are designed for an efficient discharge of large air volumes from small water network systems, filters, containers, and other devices where trapped air may impair the system's operation. The valve is appropriate for: Expelling the air at high flow velocity during the initial filling of the systems. Introducing air when the pipe drains, maintaining atmospheric pressures in the pipe, preventing collapse and cavitation damage to the conduits. Relieving the entrained air from the water, while the network is pressurized.

Available Sizes: ½"- ¾"- 1"- 2"
Available Connection Types: Threaded
